# Exercises

- 1. Install WAMP at home, set up Apache properly**
- 2. Create a 'Hello PHP!' script and display it in your browser**
- 3. Create a PHP script that displays all numbers from 1 to 1000 that divide by 3 and 7**
- 4. Create a PHP form that accepts 3 fields - number, sign and another number. The form should submit to another PHP file which validates the input and calculates based on the numbers and the mathematical symbol. Use JavaScript for frontend validation of the form.**

**5. Pick a template from**

**<http://www.css3templates.co.uk/> and convert it to a simple WordPress template. The theme should be:**

- **Activated properly**
- **Working landing page with static content**
- **Working blog index with latest blogs**
